

The National Heritage Fellowship was created to honor exceptional folk and traditional artists in the United States. In 2008, the fellowship was given to the quilter Bettye Kimbrell. Kimbrell was _____ to receive it because of her lifetime contributions to the arts.

1

Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) confused

(B) ineligible

(C) reluctant

(D) chosen

The following text is adapted from Willa Cather's 1912 novel *Alexander's Bridge*.

For the next few days Alexander was very busy. He took a desk in the office of a [Scottish] engineering firm on Henrietta Street, and was at work almost constantly. He avoided the clubs and usually dined alone at his hotel.

2

Mark for Review

As used in the text, what does the word "constantly" most nearly mean?

(A) Enough

(B) Nonstop

(C) Quickly

(D) Fearfully

According to a team of neuroeconomists from the University of Zurich, ease of decision making may be linked to communication between two brain regions, the prefrontal cortex and the parietal cortex. Individuals tend to be more decisive if the information flow between the regions is intensified, whereas they make choices more slowly when information flow is _____.

3

 Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

(A) reduced

(B) evaluated

(C) determined

(D) acquired

Ecologist Exequiel Ezcurra and colleagues found that the inhabitants of the Mexica empire used natural landmarks to track time with a high degree of _____. By observing the sun's position in relation to various points on the mountains surrounding the Basin of Mexico, the Mexica were able to precisely identify the dates when significant events such as solstices occurred.

4

Mark for Review

Which choice completes the text with the most logical and precise word or phrase?

- (A) precariousness
- (B) exactitude
- (C) resilience
- (D) inconspicuousness

Steepletop in Austerlitz, New York, is the house where Edna St. Vincent Millay lived for twenty-five years and wrote many of her poems. Now the house is a museum dedicated to Millay's life and writings. Visitors travel to this museum to feel more connected to an author they admire. To encourage that sense of connection, the museum's curators recommend nearby hiking trails and outdoor activities. Such activities help visitors appreciate the natural scenery that inspired Millay.

5

Mark for Review

Which choice best states the main purpose of the text?

- ☐ (A) To compare Steepletop with other museums
- ☐ (B) To explain why readers enjoy Millay's works
- ☐ (C) To summarize Millay's biography
- ☐ (D) To describe a museum focused on Millay's life and works

Sheep and falcons can see in three dimensions (3D), which helps them perceive distance and depth. Octopuses and squid are thought to lack 3D vision. Many researchers once thought the same about cuttlefish, but Trevor Wardill and his team wanted to test whether this assumption was true. The team studied how cuttlefish wearing 3D glasses reacted to 3D images of shrimp (a favorite prey) projected on a tank wall. Cuttlefish changed their striking position to match the 3D images, suggesting that their vision is more like that of sheep and falcons than that of octopuses or squid.

6

Mark for Review

Which choice best states the function of the underlined sentence in the text as a whole?

- (A) It explains how 3D vision in sheep and falcons differs from the type of 3D vision discussed in the text.
- (B) It explains why the animals discussed in the text were once thought to lack 3D vision.
- (C) It offers a suggestion for future research on the aspect of 3D vision discussed in the text.
- (D) It presents the results of the study of 3D vision discussed in the text.

Mexico City has high pedestrian traffic, but simply replicating a feature of Mexico City associated with walkability—e.g., its high block density—may be insufficient to induce increased walking in other cities. As urbanist Mariela Alfonzo argues, our understanding of individuals' decision-making about whether to walk is insufficiently robust: some studies emphasize the role of sidewalk width, others the role of neighborhood attractiveness, and so on, but walking decisions are made in complex contexts in which multiple conditions and needs inform individuals' choices.

7

Mark for Review

Which choice best describes the function of the references to “sidewalk width” and “neighborhood attractiveness” in the text as a whole?

- (A) They represent factors that have been identified as important influences on walking decisions but that the text suggests are merely some of the many factors that may contribute to people's decision-making about walking.
- (B) They illustrate factors that researchers believe people consider when making walking decisions in most contexts but that the text argues are unique to walking decisions made by people in Mexico City.
- (C) They identify factors that Alfonzo argues have been overemphasized in studies of decision-making about walking but that the text asserts are relevant to most people's walking decisions.
- (D) They are examples of factors that studies suggest are important in people's decision-making about walking but that the text claims most people rarely consider when making walking decisions.

The following text is Emily Dickinson's circa 1873 poem "There is no Frigate like a Book". A Frigate like a Book" A Frigate is a light fast ship; courses are swift horses.

There is no Frigate like a Book
To take us Lands away
Nor any Coursers like a Page
Of prancing Poetry—
This Traverse may the poorest take
Without oppress of Toll—
How frugal is the Chariot
That bears the Human soul.

8. Which choice best states the main idea of the text?

- A. Reading gives people a reprieve from the financial focus of modern life.
- B. Poetry can forge connections between people from different cultures.
- C. People can learn more about distant places by reading books than by traveling to those places.
- D. Literature can metaphorically transport people to new places regardless of their means.

9. Tanya Tagagsa is a writer and musician and a member of the Inuit community of Cambridge Bay in northern Canada. Critics and fellow writers have praised her work for combining traditional Inuit stories with popular genres of literature, such as fantasy fiction. But Tagaq is not the only indigenous writer to blend traditional stories with popular literature. In the 2016 novel *Wrist*, Nathan Adier successfully blended the oral storytelling tradition of their people, the Anishinabe, with horror fiction.

Which choice best states the main idea of the text?

- A. Several famous indigenous writers increased their book sales when they began incorporating traditional stories.
- B. The success of Tanya Tagaq has influenced non-indigenous authors who write in popular literary genre.
- C. Non-indigenous authors should consider the experience of indigenous readers.
- D. Recent Indigenous fiction writers are mixing traditional stories with popular literary genres

10. Uncle Vanya: Scenes From Country Life in Four Acts is an 1898 play by Anton Chekhov, originally written in Russian. In the play, professor Serabrakoff and his wife Helena have come to stay at their country estate, which Vanya manages with the help of Sonta, the professor's daughter from a previous marriage. Chekhov portrays the professor as being unable to adjust to living at the country estate, as is evident when____

Which quotation from a translation of Uncle Vanya most effectively illustrate the claim?

- A. Professor Sereirakatf says to Helena. "I am used to my library and the Lecture hall and to the esteem and admiration of my colleagues suddenly find myself plunged into this wilderness [the estate], condemned to see the same stupid people from morning till night and listen to their futile conversations."
- B. Profesor Serebrakoti says, "I am a book-worn and a scholar, and am unfamiliar with practical affairs. I cannot, I find, dispense with the help of well-informed people."
- C. Vanya says to himself, "Professor Sereirakatf is absolutely unknown, and his fame has burst like a soap-bubble"
- D. Professor Serebrakotff says to Helena, "Ever since I have been old, I have been hateful to myself, and I am sure, hateful to you all as well."

Fish whose DNA has been modified to include genetic material from other species are known as transgenic. Some transgenic fish have genes from jellyfish that result in fluorescence (that is, they glow in the dark). Although these fish were initially engineered for research purposes in the 1990s, they were sold as pets in the 2000s and can now be found in the wild in creeks in Brazil. A student in a biology seminar who is writing a paper on these fish asserts that their escape from Brazilian fish farms into the wild may have significant negative long-term ecological effects.

11

Mark for Review

Which quotation from a researcher would best support the student's assertion?

- (A) "In one site in the wild where transgenic fish were observed, females outnumbered males, while in another the numbers of females and males were equivalent."
- (B) "Though some presence of transgenic fish in the wild has been recorded, there are insufficient studies of the impact of those fish on the ecosystems into which they are introduced."
- (C) "The ecosystems into which transgenic fish are known to have been introduced may represent a subset of the ecosystems into which the fish have actually been introduced."
- (D) "Through interbreeding, transgenic fish might introduce the trait of fluorescence into wild fish populations, making those populations more vulnerable to predators."

Contributions of Three Key Industries to Oklahoma Economy in 2017

Industry	Approximate contribution
Tribal economic activity	\$7,312,400,000
Construction	\$6,797,300,000
Health care	\$13,727,300,000

The Choctaw Nation, the Citizen Potawatomi Nation, and the more than thirty other tribes in Oklahoma operate numerous businesses and collectively generate billions of dollars in revenue. In fact, when the tribes' activity is regarded as a single industry, its contribution to the Oklahoma economy in 2017 _____

12

Mark for Review

Which choice uses data from the table to most effectively complete the comparison?

- (A) exceeded the contribution made by both construction and health care.
- (B) was greater than the contribution made by health care but equal to that made by construction.
- (C) was lower than the contribution made by either construction or health care.
- (D) surpassed the contribution made by construction but fell short of that made by health care.

Peering at Adult Orangutans by Immature Orangutans

Individual	Site	Sex	Total number of peering events observed	Proportion of peering events directed at immigrants to immature individual's home region
1	Suaq	female	17	0.41
2	Suaq	female	23	0.13
8	Tuanan	male	1	1.00
16	Suaq	male	80	0.84

One way that young orangutans acquire foraging skills is through a behavior scientists call peering—closely watching older orangutans as they engage in an activity that the young have not yet mastered. Since male orangutans typically leave the area of their birth upon maturity and females do not, Beatrice Ehmann and her colleagues hypothesized that it is more advantageous for immature males than females to devote attention to orangutans who are immigrants to the home region of the immature individual, and this should be reflected in sex-specific differences in peering behavior.

13

Mark for Review

Which choice best describes data from the table that support Ehmann and colleagues' hypothesis?

- (A) The proportion of peering events directed at immigrants to immature orangutans' home regions ranged from a low of 0.13 to a high of 1.00.
- (B) Individual 8 directed a higher proportion of peering events at immigrants to its home region than did individual 16, and individual 1 directed a higher proportion of peering events at immigrants to its home region than did individual 2.
- (C) Individual 16 had the highest total number of peering events observed at 80.
- (D) Individual 2 and individual 1 directed a lower proportion of peering events at immigrants to their home regions than did individual 8 and individual 16.

Buried collections of Bronze Age metal items (called hoards) have been found all over Britain. For hoards discovered since the 1960s, such as the 1965 discovery of the Walderslade hoard, advancements like inexpensive metal detectors, ground-penetrating radar, and aerial surveys have made it much easier for searchers to locate hoards before putting the first shovel in the ground. Hoards found before the 1960s, however, such as the discovery of the Achnacree hoard around 1921, were not aided by such technologies and thus were much more likely to ____

15

Mark for Review

Which choice most logically completes the text?

- (A) include rare items from the 10th century BCE.
- (B) include gold jewelry.
- (C) occur before the ground was disturbed.
- (D) result from artifacts being unearthed accidentally.

"He was just the man for such a place, and it was just the place for such a man."
This line is from Frederick Douglass's autobiography *Narrative of the Life of Frederick Douglass* (1845). It's an example of antimetabole, a writing technique that ____ emphasis by repeating a statement in a reversed order.

16

- The Music by Black Composers (MBC) project aims to inspire aspiring music students by archiving and sharing information about the music of Black classical composers.
- Logie Wright is a Black classical music composer included in MBC's Historic Composers Directory.
- He was born in 1927 and died in 2001.

24

Mark for Review

ABC

Which choice most effectively uses information from the given sentences to set up a discussion of Wright's career for an audience already familiar with the MBC project?

- (A) Among the many talented figures included in the MBC project is classical music composer Logie Wright.
- (B) The MBC project's Historic Composers Directory highlights Black classical composers of the past, such as Logie Wright (1927–2001), in order to inspire music students to become the classical composers of the future.
- (C) While Logie Wright is considered a great composer, there are many more such composers included in the MBC Historic Composers Directory.
- (D) Born in 1927, Logie Wright passed away in 2001, according to the MBC project.

While researching a topic, a student has taken the following notes:

- Earthquakes start at a point called a “focus” and spread out from there as seismic waves.
- The two types of seismic waves that travel beneath Earth’s surface are primary waves (P waves) and secondary waves (S waves).
- P waves travel more quickly beneath Earth’s surface than do S waves.
- P waves compress and expand the ground, causing it to move backward and forward.
- S waves cause the ground to move from side to side.

26

Mark for Review

The student wants to emphasize a similarity between P waves and S waves. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) P waves and S waves both travel beneath Earth’s surface, causing the ground to move.
- (B) P waves travel away from an earthquake’s starting point at a higher rate of speed than do S waves.
- (C) Spreading out from the focus of an earthquake, P waves move the ground backward and forward.
- (D) Although P waves and S waves start at the same point, they move very differently.

While researching a topic, a student has taken the following notes:

- A currency is a money system.
- Sometimes, countries adopt a new currency to replace an older one.
- Mozambique adopted the escudo as its official currency in 1914.
- The metical replaced the escudo in 1980.
- The metical remains Mozambique's official currency.

27

Mark for Review

The student wants to specify how long Mozambique officially used the escudo. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Though Mozambique currently uses the metical, the country's former official currency was introduced in 1914.
- (B) Countries sometimes adopt new currency systems, as Mozambique did when it replaced the escudo with the metical.
- (C) The escudo was Mozambique's official currency from 1914 to 1980.
- (D) The metical has been Mozambique's official currency since 1980, when it replaced the escudo.

While researching a topic, a student has taken the following notes:

- Traditionally, manufacturers have dyed denim jeans blue by dipping them in a solution containing indigo powder.
- Indigo doesn't dissolve in just water, so manufacturers must mix hazardous chemicals with water to dissolve the powder.
- Textile researcher Smriti Rai discovered a process for dyeing blue jeans without chemicals.
- Rai added indigo powder to a hydrogel containing nanocellulose and produced a dye that could be spread directly onto the denim.
- Nanocellulose is a natural, plant-based substance that separates the molecules of indigo powder.

25

Mark for Review

The student wants to emphasize a difference between the two approaches to dyeing blue jeans. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Though created using a different process, Rai's dye contains the same ingredient as the dye produced by blue jean manufacturers.
- (B) Nanocellulose is a natural, plant-based substance that separates the molecules of indigo powder, which doesn't dissolve in water.
- (C) The traditional approach to dyeing blue jeans is to dip them in a solution containing hazardous chemicals.
- (D) Rai's approach substitutes a natural, plant-based substance for hazardous chemicals that manufacturers have traditionally used.

In 1891, design artist William Morris cofounded the Kelmscott Press, which printed editions of books using preindustrial methods. Historians argue that Morris's repudiation of industrialization is _____ the Kelmscott editions' use of handmade materials and intricate ornamentation reminiscent of medieval manuscripts; these meticulously handcrafted elements exemplify the artistry involved.

2

Mark for Review

Mahmoud Reza Hemami and colleagues showed that high moonlight intensity inhibits the activity of the Iranian jerboa (*Allactaga frouzi*), a result explicable in terms of benefits and costs: greater lunar intensity may not enable the jerboas to increase foraging success enough to offset the higher chance of detection by predatory jackals or owls. Most other nocturnal mammals respond to lunar intensity variations similarly to Iranian jerboas, but Azara's night monkeys (*Aotus azarae*) display the opposite pattern, as their heavy reliance on visual foraging results in a different balance of reward and risk.

5

Mark for Review

ABC

Which choice best describes the overall structure of the text?

- (A) It introduces an observation of a behavioral pattern, presents an explanation for the pattern, and then describes an exception to the pattern that casts doubt on that explanation.
- (B) It discusses two different responses to the same natural phenomenon, explains why one of those responses occurs, and then suggests that the other response still needs to be explained.
- (C) It presents and explains a study result, indicates that the result is similar to the results of many other studies, and then attributes a conflicting study result to a difference in that study's methods.
- (D) It describes and accounts for a finding, characterizes the finding as representative of a general pattern, and then describes and accounts for an exception to that pattern.

Text 1

In 2015 Belém, Brazil, was named a City of Gastronomy by UNESCO in recognition of the city's unique food culture. The honor is well known among both residents of the city and tourists who visit. Simply by selecting Belém, UNESCO has helped bring awareness to local recipes, cooking practices, and chefs and has provided a significant boost to the city's tourism industry.

Text 2

Many people in Belém's restaurant industry hoped that food tourism would increase after the city was chosen as a City of Gastronomy in 2015. However, as researcher Eerang Park and colleagues argue, cities must still create effective marketing strategies to benefit fully from being named a City of Gastronomy. Without the intentional effort that was made to promote the city's food scene, many current and potential visitors to Belém would not even be aware that it's home to uniquely delicious food.

6

Mark for Review

Which choice best describes a difference in how the authors of the texts view the benefits of being named a City of Gastronomy?

- (A) The author of Text 1 assumes that a city's restaurant owners and chefs are most likely to benefit from a city being named a City of Gastronomy, but the author of Text 2 states that the honor most affects tour guides and tour operators.
- (B) The author of Text 1 views Belém's status as a City of Gastronomy as having been beneficial for the city, but the author of Text 2 questions whether there's been a benefit.
- (C) The author of Text 1 considers the effects of Belém's City of Gastronomy status to be less permanent than the author of Text 2 considers them to be.
- (D) The author of Text 1 states that the benefits are automatic, while the author of Text 2 states that effort is required to fully achieve the benefits.

Like all species of baleen whales, the common minke whale feeds on tiny creatures known as krill by filtering water through bristlelike keratin structures called baleen plates. In this way, baleen whales can eat up to 30 percent of their total mass per day. And while no one would call the common minke whale small—it can have a mass as high as 4,000 kg—it is one of the smaller baleen whales and is much smaller than the fin whale, which can weigh a whopping 80,000 kg and consume as much as 24,000 kg of krill per day.

7

Mark for Review

ABC

Based on the text, what can most reasonably be concluded about krill consumption among common minke and fin whales?

- (A) Both the common minke whale and the fin whale can eat as much as 24,000 kg of krill per day.
- (B) The quantities of krill consumed by fin whales has made it difficult for common minke whales to find sufficient food.
- (C) The fin whale is able to eat more krill per day than the common minke whale is.
- (D) Most baleen whales include krill in their diets, but the common minke whale is less likely than the fin whale to do so.

A number of artists associated with hyperpop, a movement in electronic music that emerged in the 2010s, aggressively manipulate their recorded voice. The musician Arca, for example, sometimes shifts the pitch of her vocals to be much higher than that of her natural range. And even the hyperpop artists who don't rely on pitch-shifting, such as Namasenda, often distort their vocals using digital tools. By persistently modifying the voice, hyperpop invites the listener to reflect on the extent to which digital technology mediates the human experience today.

8

Mark for Review

Which description of vocal manipulation in hyperpop is best supported by the text?

- (A) It symbolizes the power of contemporary music to influence listeners' sense of self.
- (B) It represents the continuity of human experience despite social and historical change.
- (C) It serves as an example of digital technology's negative influence on daily life.
- (D) It functions as a commentary on contemporary social conditions.

Pyramids in Egypt and the Americas

Pyramid	Country	Height (meters)	Age (years before present)
The Tikal Temple IV	Guatemala	70	1,300
The Pyramid of the Moon	Mexico	42	2,100
The Pyramid of Neferirkare	Egypt	54	4,400 to 4,500
The Buried Pyramid	Egypt	7	4,600 to 4,700

A student is writing an essay about four pyramids for a history class and wants to note how long ago each pyramid was built and how tall each pyramid is. Consulting the table, the student finds that the Tikal Temple IV was built 1,300 years ago and is ____

9

Mark for Review

Which choice most effectively uses data from the table to complete the text?

(A) 54 meters tall.

(B) 42 meters tall.

(C) 7 meters tall.

(D) 70 meters tall.

STUDIES OF THE EFFECTS OF TILLING VS. NO TILLING ON CROP YIELDS

Authors	Crop	Crop yield with tilling (kilograms per hectare)	Crop yield with no tilling (kilograms per hectare)
Eduardo Martínez and colleagues	winter wheat	4,829	2,894
Fuseini Issaka and colleagues	rice	6,400	6,300
Roberto Izaurrealde and colleagues	spring barley	1,676	2,515
Igor Bogunovic and colleagues	maize	3,884	5,716

Eduardo Martínez and colleagues found that tilling—the practice of turning soil with hoes, plows, or other machines before planting crops—was associated with an increased yield of winter wheat. But some studies of other crops have found the opposite effect, raising the question of whether the increase in yield found by Martínez and colleagues is specific to their study crop. However, this doesn't seem to be the case: _____

10

Mark for Review

ABC

Which choice most effectively uses data from the table to complete the assertion?

- (A) Igor Bogunovic and colleagues reported an even larger positive effect of tilling on the yield of maize.
- (B) a study using winter wheat yielded 4,829 kilograms per hectare with tilling and only 2,894 kilograms per hectare without tilling.
- (C) Fuseini Issaka and colleagues found a similar association in a study using rice.
- (D) crop yields with tilling have ranged from 1,676 kilograms per hectare for spring barley to 6,400 kilograms per hectare for rice.

The phrase *omo-ropmo bilak* is a past-oriented expression used by members of the Yupno, an Indigenous group in Papua New Guinea, that translates to “a couple of years ago.” Rafael Núñez and colleagues recorded Yupno speakers explaining several of these temporal-related words and phrases and coded each speaker’s manual gestures. Previous research has found evidence of Spanish speakers referring to the front/back axis to describe events in time, and many researchers believe that this tendency to make temporal distinctions along imagined linear axes is universal. However, Núñez and colleagues claim that this tendency is not in fact ubiquitous.

11

Mark for Review

ABC

Which finding, if true, would most directly support Núñez and colleagues’ claim?

- (A) Yupno speakers typically use their left hand to make temporal gestures regardless of whether the gestures are past oriented or future oriented.
- (B) When outdoors and referring to the future, Yupno speakers facing uphill gesture in front of themselves, whereas those facing downhill gesture behind themselves.
- (C) Yupno speakers were observed making temporal gestures both indoors and outdoors, though with greater frequency when indoors.
- (D) Some Yupno grammatical structures used when talking about the past are also used in Spanish.

Many studies have found a positive association between levels of dissolved organic carbon and mercury in bodies of fresh water in North America. But Stéphane Guédron, Delphine Tisserand, and colleagues did not find this correlation in a study conducted in Laos, leading some scientists to hypothesize that the association is particular to North America. However, several other studies conducted outside North America, such as one by Ida Tjerngren and colleagues in Sweden, showed similar results to the North American studies, while few have produced results similar to those of Guédron, Tisserand, and colleagues' study, suggesting that ____.

12

Mark for Review

Which choice most logically completes the text?

- (A) dissolved organic carbon and mercury levels do typically rise and fall together in fresh water.
- (B) levels of dissolved organic carbon and mercury in bodies of fresh water are both much higher in Laos than elsewhere.
- (C) there were circumstances unique to Tjerngren and colleagues' study that impeded accurate measurements of mercury levels.
- (D) the hypothesis that the positive association is particular to North America is correct.

Some ethicists hold that the moral goodness of an individual's actions depends solely on whether the actions themselves are good, irrespective of the context in which they are carried out. Philosopher L. Sebastian Purcell has shown that surviving works of Aztec (Nahua) philosophy express a very different view. Purcell reveals that these works posit an ethical system in which an individual's actions are judged in light of how well they accord with the individual's role in society and how well they contribute to the community. To the extent that these works are representative of Aztec thought, Purcell's analysis suggests that _____

Which choice most logically completes the text?

- (A) the Aztecs would have disputed the idea that the morality of an individual's actions can be assessed by appealing to standards of behavior that are independent of the individual's social circumstances.
- (B) the Aztecs would not have accepted the notion that the morality of an individual's actions can be fairly evaluated by people who do not live in the same society as that individual.
- (C) actions by members of Aztec society who contributed a great deal to their community could be judged as morally good even if those actions were inconsistent with behaviors the Aztecs regarded as good in all contexts.
- (D) similar actions performed by people in different social roles in Aztec society would have been regarded as morally equivalent unless the actions led to different outcomes for the community.

The Austronesian language family includes Banjarese, Hiligaynon, and some 1,200 other languages throughout the Pacific, making it one of the largest language families in the world and of keen interest to _____ of Leiden University.

(D) However,

While researching a topic, a student has taken the following notes:

- Elizabeth Catlett's sculpture *Recognition* (1970) shows two African American figures with rounded, indistinct features.
- The figures reach out to each other in a pose that symbolizes a close, supportive relationship.
- Her sculpture *Students Aspire* (1978) shows two African American figures with sharply defined features.
- The figures hold an equal sign above their heads with one hand and embrace each other with the other hand.
- This pose symbolizes their support for each other in the pursuit of equality.

25

ABC

The student wants to emphasize a similarity between the two sculptures. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Catlett's *Students Aspire* depicts two figures supporting each other in the pursuit of equality.
- (B) *Recognition* and *Students Aspire* both show African American figures in poses that symbolize supportive relationships.
- (C) Catlett completed *Recognition* in 1970 and *Students Aspire* in 1978.
- (D) The figures in *Recognition* have features that are rounded and indistinct, while the figures in *Students Aspire* have sharply defined features.

While researching a topic, a student has taken the following notes:

- Tepeapulco is a municipality in the state of Hidalgo, Mexico.
- Municipalities are governmental regions responsible for providing many public services to their residents.
- One service they provide is water treatment.
- Tepeapulco's population was 56,245 in 2020.
- Hidalgo is divided into 84 municipalities.

26

Mark for Review

The student wants to provide an example of a public service that Tepeapulco is responsible for. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Tepeapulco is one of 84 municipalities in Hidalgo providing public services to their communities.
- (B) Tepeapulco—a governmental region in the state of Hidalgo, Mexico—provides public services to its residents.
- (C) In 2020, the municipality of Tepeapulco had a population of 56,245.
- (D) As a municipality, Tepeapulco is responsible for providing water treatment to its residents.

While researching a topic, a student has taken the following notes:

- The Mohs scale of mineral hardness is a ten-point scale that orders minerals by hardness based on their ability to scratch other minerals.
- Minerals with larger numbers are harder than minerals with smaller numbers and can leave visible scratches on them.
- Minerals with smaller numbers are softer than minerals with larger numbers and cannot leave visible scratches on them.
- The mineral fluorite has a Mohs scale number of 4.
- The mineral orthoclase has a Mohs scale number of 6.
- The mineral corundum has a Mohs scale number of 9.

27

Mark for Review

The student wants to compare the hardness of fluorite and corundum. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) The Mohs scale of mineral hardness can be used to order orthoclase, fluorite, and corundum by their ability to scratch other minerals.
- (B) A mineral with a Mohs number of 6, like orthoclase, is harder than one with a Mohs number of 4, like fluorite.
- (C) Corundum can leave visible scratches on fluorite, which means that corundum is harder than fluorite.
- (D) Corundum can leave visible scratches on orthoclase, which corundum has a higher number than orthoclase on the Mohs scale of mineral hardness.
