Reading and writing only

Routing

Dragon against Tiger is an important work of Nihonga, or classical Japanese painting. Unlike Wada Eisaku, who adopted traditional European methods such as painting with oil on canvas, Hashimoto Gahō _____ traditional Japanese approaches. For instance, Hashimoto produced Dragon against Tiger by applying color pigments to a silk surface.

1. Which choice completes the text with the most logical and precise word or phrase?

A

overlooked

B

distrusted

C

embraced

D

released

Domesticated thousands of years ago in South America, the tomatillo deviates structurally from the wild plant it is descended from. Summer squash, another domesticated crop from the Americas, doesn't closely resemble any wild plant, and genetic research only recently _____ its ancestor to be the wild Johnny gourd.

2. Which choice completes the text with the most logical and precise word or phrase?

A

revealed

B

expanded

C

encouraged

D

petitioned

The following text is adapted from Anton Chekhov's 1904 play *The Cherry Orchard* (translated by Julius West in 1916).

TROFIMOV: Believe me, Anya, believe me! I'm not thirty yet, I'm young, I'm still a student, but I have undergone a great deal! I'm as hungry as the winter, I'm ill, I'm shaken... and where haven't I been—fate has tossed me everywhere!

3. As used in the text, what does the word "undergone" most nearly mean?

A

Uncovered

B

Ignored

C

Experienced

D

Conveyed

Text corpora such as the British National Corpus are enormous collections of electronically stored texts that can be used for empirical testing of hypotheses regarding the frequency of typical word usage. If one has a ____ that the word "own" has a high incidence in English, for example, an analysis of a corpus can support that hypothesis by showing that "own" is the eighth most commonly used adjective.

4. Which choice completes the text with the most logical and precise word or phrase?

A

synopsis

B

scheme

C

recognition

D

supposition

Researchers have long hypothesized that woolly mammoths were hunted to extinction in North America by humans using spears with grooved tips known as Clovis points. One anthropologist set out to test this hypothesis. Using a mechanical spear-thrower, he launched spears with Clovis points into mounds of clay—substitutes for the animals' large bodies. The projectiles generally penetrated only a few inches into the clay, an amount insufficient to have harmed most woolly mammoths. This led the anthropologist to conclude that hunters using spears with Clovis points likely weren't the principal drivers of the extinction.

5. Which choice best states the main purpose of the text?

A

To argue for the significance of new findings amid an ongoing debate among researchers

B

To discuss the advantages and disadvantages of the method used in an experiment

C

To summarize two competing hypotheses and a major finding associated with each one

D

To describe an experiment whose results cast doubt on an established hypothesis

In what is now Washington state, the Tulalip Tribes operate the Hibel Cultural Center. Relying on traditional knowledge to guide the design of exhibits, this institution presents Tulalip history and culture to the tribes' citizens. The Turtle Mountain Band of Chippewa, a tribe in North Dakota, employs a similar strategy in its own cultural center. Both centers contrast with museums that aren't Indigenous-led; when displaying Indigenous artifacts, such museums tend to anticipate mainly non-Indigenous audiences and rely on Euro-centric strategies for designing exhibits.

6. Which choice best describes the overall structure of the text?

A

It describes how tribal cultural centers designed exhibits of a particular set of artifacts, then analyzes how non-Indigenous institutions designed exhibits of the same artifacts.

B

It examines how tribal citizens respond to exhibits at tribal cultural centers, then speculates how non-Indigenous audiences would respond to the same exhibits.

C

It discusses two cultural centers operated by tribes, then compares them with non-Indigenous institutions that present Indigenous exhibits.

D

It outlines an early strategy for exhibit design used by one tribal cultural center, then explains a newer strategy used by a different tribal cultural center.

Text 1 The University of Wisconsin and the online class provider Coursera are two of the many institutions offering training programs in entrepreneurship. But what results do such programs produce? In a study of aspiring entrepreneurs in the United States, researcher James Chrisman and colleagues addressed this question and reported that participants who received entrepreneurial training showed high performance at their jobs.

Text 2 While studies of entrepreneurial training typically report positive results, a close look reveals widespread methodological shortcomings that could explain those findings. These studies are plagued by insufficient sample sizes, a lack of control groups, and failures to establish pretraining baselines for the measured attributes of participants.

EliteXSAT | Eljani Al-Hadi

7. Based on the texts, the author of Text 2 would most likely want to know if Chrisman and colleagues took steps to preclude which potential objection to the finding described in Text 1?

A

The participants would have shown greater responsiveness to the training if the training sessions had lasted longer.

B

The participants would have been less likely to show high performance at their jobs if the study sample size had been smaller.

C

The participants would have shown high performance at their jobs regardless of whether they received the training.

D

The participants would have responded to the training differently if they had not known that they were participating in a study.⁷

"Cocoa" is an example of a loanword—that is, a word that originated in one language and was later adopted by another. The word came to English indirectly from cacao, the Spanish word for the plant that chocolate is made from. Spanish had borrowed it from Nahuatl, an Indigenous language of Central Mexico, in which the word's original form is cacahuatl. "Puma" is also Indigenous in origin and entered English through Spanish. But in this case, the original source was Quechua, a language of South America, in which the word for the mountain lion is also puma.

8.The author makes which point about the Spanish language?

A

It has served as a medium through which Indigenous languages have influenced English.

B

Its contribution to English vocabulary roughly equals the collective contribution by Indigenous languages.

C

It adopted Nahuatl and Quechua words in approximately equal numbers.

D

It has borrowed words from Indigenous languages and contributed words to them.

In Bolivia, use of solid fuel (e.g., coal, wood) as a share of total household fuel use fell by more than half between 2000 and 2015; such shifts are typically explained by appeal to the energy ladder, a model holding that fuel choice is mediated mainly by household income (specifically, high-technology fuels displace solid fuels as incomes rise). Richard Hosier and Jeffrey Dowd's study of fuel use in Zimbabwe shows how reductive this model is, however: although income of course constrained fuel choice, several factors, including the difficulty of acquiring fuel sources, influenced decisions.

9. Based on the text, the author would most likely agree with which statement about household income?

A

It can explain some but not all of the differences in fuel choice across households.

B

It is often said to influence household fuel choice but actually does not.

C

It affects household fuel choice but not for the reasons assumed by the energy ladder model.

D

It constrains the amount of fuel households use but not the type of fuel they use.

The following text is adapted from Daniel Defue's 1704 nonfiction book *The Storm*. The sermon is a sound of words spoken to the ear, and prepared only for present meditation, and extends no farther than the strength of memory can convey it; a book printed is a record; remaining in every man's possession, always ready to renew its acquaintance with his memory, and always ready to be produced as an authority or voucher to any reports he makes out of it, and conveys its contents for ages to come, to the eternity of mortal time when the author is forgotten in his grave.

10. Which choice best states the main idea of the text?

A

Words committed to print have a greater permanence than messages that are merely spoken aloud.

B

People are less likely to forget a message when they hear it spoken aloud than they are when they read it in print.

C

Unless a spoken message is delivered by an expert, it can be safely ignored.

D

Most authors have little hope of being remembered well past their lifetimes.

Total Science Research Submissions
by Topic, 2016–2019

A student is researching the trends in the topics submitted to a national science fair for high school students. The graph shows the number of submissions by topic that were made each year. Based on the data in the graph, the student claims that there were more medicine and health research topics submitted in 2019 than in any other year.

11. Which choice most effectively uses data from the graph to support the underlined claim?

A

In 2016, the number of cellular and molecular biology topic submissions was the same as the number of animal science topic submissions.

B

In 2019, there were more physics and space science topic submissions than there were medicine and health topic submissions.

C

The lowest number of animal science topic submissions in a year was approximately 95 in 2016.

D

The highest number of medicine and health topic submissions during the period shown is approximately 285 in 2019.

Claudine at School is a 1900 novel by Colette, originally written in French. The narrator is a fifteen-year-old girl living in a small, rural town. She presents herself as having a strong emotional attachment to the surrounding forests: _____

12. Which quotation from a translation of Claudine at School most effectively illustrates the claim?

A

"If I had a Mamma, I know very well that she would not have let me stay [in Montigny] twenty-four hours. But Papa—he doesn't notice anything and doesn't bother about me."

B

"And then there are my favourites, the great woods that are sixteen and twenty years old. It makes my heart bleed to see one of those cut down."

C

"Green meadows make rifts in [the woods] here and there, so do little patches of cultivation. But these do not amount to much, for the magnificent woods devour everything. As a result, this lovely region is atrociously poor and its few scattered farms provide just the requisite number of red roofs to set off the velvety green of the woods."

D

"Under the firs, you light a fire, even in summer, because it's forbidden; you cook any old thing, an apple, a pear, a potato stolen from a field, some wholemeal bread if you've nothing better."

Annual Mean Forest Patch Size
for Three Land Use Capability Classes
in the Chorotega Region, Costa Rica

To understand the extent of deforestation in the Chorotega region of Costa Rica, Juan Pablo Arroyo-Mora and colleagues used historical aerial photography and remote sensing data to track changes in the annual mean size of forest patches across different land use capability classes (categories that indicate possible uses of forest land). Due to the Chorotega region's

13. Which choice most effectively uses data from the graph to complete the assertion?

A

difference between mean forest patch size in Class VIII and in Class VI in 2000.

B

steady increase in mean forest patch size from 1960 to 1979, followed by a more sudden increase in 1986 for all classes.

C

increase in mean forest patch size after 1986 in all classes.

D

similarity in mean forest patch size in Class VIII and Class VII in 1986.

Veronica L. Bura, Akito Y. Kawahara, and Jayne E. Yack investigated the evolution and function of sound production in silk moth and hawk moth caterpillars. They found that during harmless simulated attacks on isolated caterpillars, 33% of the tested species produced sound, which ranged from clicks in *Actias luna* to whistles in *Rhodinia fugax*. Although some insects use sound to communicate with members of the same species, the researchers claim that the caterpillar sounds recorded in their study are directed primarily at predators.

14. Which finding, if true, would most directly support Bura and colleagues' claim?

A

In most cases, the sound that a caterpillar species produced during simulated attacks was not produced by other caterpillar species during simulated attacks.

B

Chickens and yellow warblers, two predators of caterpillars, have been observed to stop their attacks in response to caterpillar sounds.

C

Each caterpillar species tended to produce one sound during simulated attacks, although individuals occasionally made a variety of other sounds during simulated attacks as well.

D

Caterpillar clicks were emitted in a frequency detectable by birds that prey on caterpillars, but caterpillar whistles were not.

In dialects of English spoken in Scotland, the "r" sound is strongly emphasized when it appears at the end of syllables (as in "car") or before other consonant sounds (as in "bird"). English dialects of the Upland South, a region stretching from Oklahoma to western Virginia, place similar emphasis on "r" at the ends of syllables and before other consonant sounds. Historical records show that the Upland South was colonized largely by people whose ancestors came from Scotland. Thus, linguists have concluded that _____

15. Which choice most logically completes the text?

A

the English dialects spoken in the Upland South acquired their emphasis on the "r" sound from dialects spoken in Scotland.

B

emphasis on the "r" sound will eventually spread from English dialects spoken in the Upland South to dialects spoken elsewhere.

C

the English dialects spoken in Scotland were influenced by dialects spoken in the Upland South.

D

people from Scotland abandoned their emphasis on the "r" sound after relocating to the Upland South.

What makes the theremin a unique musical instrument? You play it without touching it, when you place your _____ the pitch will shift as your hands move through the air.

16. Which choice completes the text with the most logical transition?

A

hand's between the two antenna's.

B

hands between the two antennas.

C

hands' between the two antennas',

D

hands' between the two antennas,

For example,

B

Next,

C

Similarly,

D

In contrast,

EliteXSAT | Eljan Ahmadli

While researching a topic, a student has taken the following notes:

- A lever is a simple machine consisting of a rigid beam and a fulcrum.
- The fulcrum is the point about which the beam pivots.
- The input force (effort) is the force applied to the lever.
- The output force (load) is the force that the lever exerts on another object.
- In first-class levers, the fulcrum is located between the effort and the load.
- In second-class levers, the load is located between the effort and the fulcrum.

23. The student wants to contrast first-class levers and second-class levers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A

In levers, the effort is the force applied to the lever; the load, in contrast, is the force that the lever exerts on another object.

B

In first-class and second-class levers, the fulcrum and the load are in different locations.

C

First-class levers are simple machines consisting of a rigid beam and a fulcrum, but then again, the same is true of second-class levers.

D

In first-class levers, the fulcrum is located between the effort and the load, but in second-class levers, the load is located between the effort and the fulcrum.

- Richard Serra is an American artist.
- He is known for his large metal sculptures.
- His large sculpture Open Ended is made of weathering steel.
- His large sculpture Strike: To Roberta and Rudy is made of hot-rolled steel.

24. Which choice most effectively uses information from the given sentences to emphasize a difference between the two sculptures?

A

Open Ended and Strike: To Roberta and Rudy are both large metal sculptures by artist Richard Serra.

B

Strike: To Roberta and Rudy is one of artist Richard Serra's large metal sculptures.

C

Artist Richard Serra is the creator of the weathering steel sculpture Open Ended.

D

Open Ended is made from a different kind of steel than Strike: To Roberta and Rudy.

- Maya Lin is an American artist known for her memorials and large-scale installation artworks.
- She became famous in 1982 when she completed the Vietnam Veterans Memorial, which consists of two 246-foot granite walls.
- She completed Water Line in 2006.
- It is an installation composed of aluminum tubing that fills an entire gallery room.
- She completed Seven Earth Mountain in 2015.
- It is an installation composed of soil that fills an entire gallery room.

25. Which choice most effectively uses information from the given sentences to emphasize a difference between Water Line and Seven Earth Mountain?

A

After completing the Vietnam Veterans Memorial, Maya Lin completed Water Line, another large-scale work.

B

The sprawling size of Maya Lin's Vietnam Veterans Memorial is echoed in Water Line, a work made of aluminum tubing that fills an entire gallery room.

C

Maya Lin's Water Line is composed of aluminum tubing; Seven Earth Mountain, by contrast, is composed of soil.

D

Maya Lin is known for her memorials and installation art, such as Water Line and Seven Earth Mountain.

While researching a topic, a student has taken the following notes:

- A supercontinent is a single landmass made up of most or all of Earth's continents.
- Over time, continents merge together to form supercontinents, which then break apart.
- This process is believed to take hundreds of millions of years and is known as the supercontinent cycle.
- Euramerica and Kenorland were supercontinents.
- Euramerica formed about 300 million years ago.
- Kenorland formed about 2.6 billion years ago.

26. The student wants to specify when Euramerica formed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A

The supercontinent Euramerica formed about 300 million years ago.

B

Over hundreds of millions of years, the supercontinent cycle results in supercontinents forming and breaking apart.

C

Euramerica was a supercontinent, a single landmass made up of most or all of Earth's continents.

D

Long ago, the Earth was home to supercontinents like Euramerica and Kenorland.

- The Haystack Mountain School of Crafts (1961) is a building complex designed by American architect Edward Larrabee Barnes.
- It is located in Deer Isle, Maine.
- It features a cluster of cedar-shingled buildings.
- It is considered an impressive example of critical regionalist architecture.

27. Which choice most effectively uses information from the given sentences to emphasize the location of the Haystack Mountain School of Crafts?

A

Those wishing to see the Haystack Mountain School of Crafts in person will have to travel to Deer Isle, Maine.

B

A stunning example of critical regionalist architecture, Edward Larrabee Barnes's Haystack Mountain School of Crafts features a cluster of cedar-shingled buildings.

C

The architect responsible for designing the Haystack Mountain School of Crafts in Deer Isle, Maine, was Edward Larrabee Barnes.

D

Edward Larrabee Barnes is known for designing a building complex that features a cluster of cedar-shingled buildings.

Easier

Whether the reign of a French monarch such as Francis II or Louis XI was considered historically significant or, conversely, relatively _____, its trajectory was shaped by questions of legitimacy and therefore cannot be understood without a corollary understanding of the factors that allowed the monarch to assert a claim to the throne successfully.

1, Which choice completes the text with the most logical and precise word or phrase?

A

momentous

B

inconsequential

C

benevolent

D

genuine

In the 2010s, the price of vintage Teenage Mutant Ninja Turtles action figures rose dramatically, which had the counterintuitive effect of ____ demand: buyers who hadn't previously wanted to purchase old action figures thronged the market, believing prices would continue to rise and the toys could be resold later at a profit.

Why do rusty-spotted cats purr but jaguars roar? Researchers hypothesize that this difference between the two feline species may be partly due to a U-shaped bone in their throats called the hyoid. Rusty-spotted cats, which are much smaller than jaguars, have a rigid hyoid that rumbles when the cat's larynx vibrates, resulting in a purr. By contrast, jaguars have a somewhat flexible hyoid, and the bone is attached to the skull with a stretchy ligament that rusty-spotted cats lack. These traits allow jaguars and most other species of big cats to produce powerful roars. The same traits may also prevent most big cats from purring.

5. Which choice best describes the overall structure of the text?

A

The text compares the habitats of two species, then explains how those habitats are changing.

B

The text presents a theory about two species, then discusses facts that weaken it.

C

The text poses a question about two species, then presents a possible answer.

D

The text describes a behavior shared by two species, then discusses other behaviors shared by them.

Scholarly interest in literary juvenilia—writings by children and teenagers—tends to focus on unpublished works by authors who became famous as adults, such as Charles Dickens's poem "The Bill of Fare," which he wrote around the ages of 18-20, because they offer insights into their authors' artistic development. But some scholars also argue that recovering juvenilia by lesser-known writers is essential to understanding literary history: Daisy Ashford's novels, which she published as a child, were widely read by contemporaries and are therefore deserving of closer attention.

6. Which choice best states the main purpose of the text?

A

To describe the challenges famous writers encountered when seeking to publish works written in their childhood

B

To present reasons why literary scholars consider juvenilia to be valuable resources

C

To compare the accomplishments of young writers with those of their adult contemporaries

D

To argue that Ashford's novels have more literary merit than Dickens's juvenilia do

To understand how temperature change affects microorganism-mediated cycling of soil nutrients in alpine ecosystems, Eva Kastovska et al. collected plant-soil cores in the Tatra Mountains at elevations around 2,100 meters and transplanted them to elevations of 1,700—1,800 meters, where the mean air temperature was warmer by 2°C. Microorganism-mediated nutrient cycling was accelerated in the transplanted cores; crucially, microorganism community composition was unchanged, allowing Kastovska et al. to attribute the acceleration to temperature-induced increases in microorganism activity.

7. It can most reasonably be inferred from the text that the finding about the microorganism community composition was important for which reason?

A

It provided preliminary evidence that microorganism-mediated nutrient cycling was accelerated in the transplanted cores.

B

It suggested that temperature-induced changes in microorganism activity may be occurring at increasingly high elevations.

C

It ruled out a potential alternative explanation for the acceleration in microorganism-mediated nutrient cycling.

D

It clarified that microorganism activity levels in the plant-soil cores varied depending on which microorganisms comprised the community.

Michael G. Campana and colleagues relied on historical DNA (hDNA)—genomic data incidentally preserved in specimens housed in natural history collections—to investigate the evolutionary origins of a fungal pathogen affecting bats. Although this approach offers unique benefits, such as access to genomic data from extirpated populations, it remains a relatively underutilized resource because hDNA is often to some extent degraded, a situation not easily remediable under current methodological paradigms and with extant DNA extraction and analysis technologies.

8. Information in the text best supports which statement about hDNA?

A

It may yield insights that other types of genomic data cannot.

B

It has thus far proved valuable mainly to researchers studying pathogens.

C

It may be underused because of its controversial status among scientists.

D

It tends to be much more degraded than other types of DNA of comparable age.

In a paper for an art history class, a student claims that Rosa Bonheur's 1855 painting *The Horse Fair* marks a significant change in Bonheur's artistic development.

9. Which quotation from an art history textbook would most effectively support the student's claim?

A

"The paintings that Bonheur produced before *The Horse Fair* can be thought of as belonging to her earlier style, to which she never returned."

B

"Of all Bonheur's paintings, none so clearly represents her abilities and ideas as *The Horse Fair*."

C

"*The Horse Fair* has been analyzed extensively since it was first exhibited, as no two viewers seem to agree about exactly what the painting means."

D

"Although Bonheur was clearly influenced by other artists of her time, she was also an artist ahead of her time, as *The Horse Fair* demonstrates."

10. Neurobiologists Laura Cuaya, Raul Hernandez-Perez, and colleagues investigated the language detection abilities of eighteen dogs. The researchers monitored the brain activity of Kun-kun (a border collie), Bingo (a mixed breed), and other dogs while the animals listened to three recordings: one of *The Little Prince* being read in Spanish, the second in Hungarian, and a third made up of short, randomly selected fragments of the first two, scrambled so that they didn't resemble human speech. Each dog was familiar with either Spanish or Hungarian, but not both. The team concluded that differences in dogs' anatomical features may affect their ability to distinguish speech from nonspeech.

EliteXSAT | Eljan Ahmadi

10. Which finding from the study, if true, would most directly support the team's conclusion?

A

Compared with longer-headed dogs, shorter-headed dogs showed less difference in brain activity when hearing either Spanish or Hungarian than when hearing the scrambled recording.

B

Compared with longer-headed dogs, shorter-headed dogs showed a greater difference in brain activity when hearing the language they were accustomed to than when hearing the other language.

C

The pattern of brain activity that long-headed dogs showed when hearing the scrambled recording was different from the pattern of brain activity that short-headed dogs showed when hearing the language they were accustomed to.

D

Long-headed dogs accustomed to hearing Spanish tended to show more brain activity when hearing Spanish than long-headed dogs accustomed to hearing Hungarian showed when hearing Hungarian.

"Poetry" is a 1919 poem by Marianne Moore. The poem highlights an ambivalence toward poetry as the speaker acknowledges its merits while also expressing a sense of displeasure, writing ____

11 Which quotation from "Poetry" most effectively illustrates the claim?

A

"nor is it valid / to discriminate against 'business documents and / school-books'; all these phenomena are important."

B

"One must make a distinction / however: when dragged into prominence by half poets, the result is not / poetry"

C

"when [poems] become so derivative as to become unintelligible, the / same thing may be said for all of us—that we / do not admire what / we cannot understand.

D

"Reading [poetry], however, with a perfect contempt for it, one discovers that there is in / it after all, a place for the genuine."

Cane is a 1923 novel by Jean Toomer. In one portion of the novel, Toomer uses figurative language to connect the narrator's urban environment of Washington, DC, and the rural South of the narrator's past, writing, _____

12. Which quotation from *Cane* most effectively illustrates the claim?

A

"The [train] engines of this valley have a whistle, the echoes of which sound like iterated gasps and sobs. I always think of them as crude music."

B

"I sang, with a strange quiver in my voice, a promise-song."

C

"The young trees had not outgrown their [planter] boxes then. V Street [in Washington, DC] was lined with them."

D

"And when the wind is from the South, soil of my homeland falls like a fertile shower upon the lean streets of [Washington, DC]."

Simulated Change in Annual Aquifer Input and
Irrigation Output if Precipitation Concentration
Increases as Climate Models Predict

Baseline concentration of annual precipitation	% change in water entering aquifers	% change in surface water used for irrigation	% change in groundwater used for irrigation
Precipitation is currently somewhat concentrated	4.9	0.4	0.9
Precipitation is currently evenly	11.0	9.0	7.9
Precipitation is currently evenly distributed	11.0	9.0	7.9

Some climate models for the western United States predict that while total annual precipitation may remain unchanged from the present level, precipitation will become concentrated into fewer but more intense rain and snow events. University of Texas climate scientist Geeta Persad and her colleagues simulated how the amount of water entering aquifers and the amount being used for irrigation purposes would change if this were to occur. Persad and her colleagues concluded that concentration of precipitation into fewer events would result in a higher number of dry days, triggering more irrigation, but that this change in irrigation output is highly sensitive to the baseline concentration of precipitation that currently exists in an area.

13. Which choice best describes data from the table that support Persad and her colleagues' conclusion?

A

If baseline precipitation is somewhat concentrated, the amount of water being used for irrigation will increase 0.4% for surface water and 0.9% for groundwater, whereas the amount of water entering aquifers will increase 11.0% if baseline precipitation is evenly distributed.

B

If baseline precipitation is somewhat concentrated, water use for irrigation will increase only slightly, whereas it will increase 9.0% for surface water and 7.9% for groundwater if baseline precipitation is evenly distributed.

C

If baseline precipitation is somewhat concentrated, the amount of water entering aquifers will increase 4.9%, while the amount being used for irrigation will increase 0.4% for surface water and 0.9% for groundwater.

D

If baseline precipitation is somewhat concentrated, water use for irrigation will decline by a small amount, whereas it will increase 11.0% for surface water and 9.0% for groundwater if baseline precipitation is evenly distributed.

Ships in the British Royal Navy during the Napoleonic Wars (1803-1815) were ranked based on military strength. The system considered the number of a ship's cannons and decks. "First-rate" was the highest ranking, and "sixth-rate" was the lowest ranking, followed by unranked ships. The size of a ship's crew was based on this ranking: first-rate ships had between 850 and 875 crewmen, while lower-ranked ships had fewer. Two of the ships in the British Royal Navy from this period were the Boyne (98 cannons and three decks) and the Britannia (120 cannons and three decks). Of these two, only the Britannia was ranked a first-rate ship. It can therefore be concluded that _____

14. Which choice most logically completes the text?

A

some ships with three decks had a crew of fewer than 850 people.

B

the Britannia needed a crew larger than 875 people in order to operate efficiently.

C

the Boyne had a larger crew than the Britannia.

D

all ships with at least 98 cannons had a crew of at least 850 people.

15. In a 2018 study, Deepak Jaiswal and Rishi Kant found that consumers' knowledge of environmental issues had no effect on the likelihood that the consumers would purchase environmentally friendly products. Since this study was based on fewer than 400 young adults in India, however, doubts have been raised about how reliable and representative the findings are. To better understand the issue, Wencan Zhuang and colleagues analyzed the results of 54 studies of eco-friendly consumer behavior, such as a 2018 study from Indonesia that included 916 participants and a 2018 study from India with 202 participants. Taking all 54 studies together, Zhuang and colleagues found a significant positive effect of environmental knowledge on eco-friendly purchasing decisions, suggesting that _____

15.Which choice most logically completes the text?

A
a sample size of 202 may be sufficient to make reliable conclusions about the relationship between knowledge of environmental issues and purchasing decisions.

B
concerns about the broad applicability of Jaiswal and Kant's conclusion were justified.

C
the number of participants in Jaiswal and Kant's study was far below the number of participants in most studies of purchasing decisions.

D
Jaiswal and Kant's methodology was more precise than the methodology used in the 2018 study from Indonesia.

In Norway, the Longyearbyen observatory site monitors activity in the upper atmosphere of the northern ____ in Australia, another observatory site, Buckland Park, monitors the sky of the southern hemisphere. Together, they are part of the Super Dual Auroral Radar Network—or SuperDARN, as space physicists like Tadahiko Ogawa call it.

While researching a topic, a student has taken the following notes:

- Documentary TV programs in the slow TV genre consist of uninterrupted broadcasts of ordinary events in real time.
- Nordlandsbanen: Minutt for Minutt is a Norwegian slow TV program.
- The 10-hour-long program documented a train ride from Trondheim to Bodo.
- It first aired in 2012.
- In her book *Spectacular Television: Exploring Televisual Pleasure*, British film scholar Helen Wheatley writes that slow TV "offers unspectacular' spectacle."

EliteXSAT | Eljar Ahmad

25. The student wants to provide a specific example of a slow TV program. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A

British film scholar Helen Wheatley writes about the slow TV genre in her book *Spectacular Television: Exploring Televisual Pleasure*.

B

An example of the slow TV genre can be seen in *Nordlandsbanen: Minutt for Minutt*, a 2012 Norwegian show featuring an uninterrupted 10-hour real-time broadcast of a train ride from Trondheim to Bodo.

C

Slow TV programs provide uninterrupted broadcasts of ordinary events, such as train rides, in real time.

D

With their uninterrupted broadcasts, slow TV programs offer what film scholar Helen Wheatley calls the "unspectacular" spectacle of ordinary events occurring in real time.

- Calida Garcia Rawles is an African American painter.
- She is known for her large-scale, hyperrealistic paintings depicting African American figures in water.
- The painting *Lightness of Being* (24 x 30 in) depicts a young man with his arms outstretched floating on the right side of the canvas.
- *Lost in the Shuffle* (36 x 24 in) depicts two young men with their arms outstretched floating in the bottom left and upper right corners of the canvas.
- She paints the water with vivid blue colors, including periwinkle and cobalt.
- The mood in the paintings is placid.

EliteXSAT | Eljan Ahmedli

26. Which choice most effectively uses information from the given sentences to emphasize the location of the figures in *Lost in the Shuffle*?

A

While the number of figures may differ, constant among Rawles's hyperrealistic works is the placid mood that the paintings evoke.

B

In Rawles's painting *Lost in the Shuffle*, two young men are depicted in the bottom left and upper right corners of the canvas.

C

At 36 by 24 inches, Rawles's *Lost in the Shuffle* is even larger than the sizable 24-by-30-inch painting *Lightness of Being*.

D

Rawles captures the water in paintings such as *Lightness of Being* and *Lost in the Shuffle* in vivid hues of periwinkle and cobalt.

- Jean-Michel Basquiat was an American artist who produced more than two thousand drawings and paintings.
- Most of his works were completed in New York City in the 1980s.
- His work Mater was completed in 1982.
- The work is composed of acrylic and oil stick on canvas and measures 72 inches by 84 inches.
- Mater was purchased by a private collection for \$5.8 million in a 2009 auction.

27. Which choice most effectively uses information from the given sentences to emphasize the scope of Basquiat's work?

A

Mater is just one of more than two thousand drawings and paintings completed by American artist Jean-Michel Basquiat.

B

Though artist Jean-Michel Basquiat completed most of his two thousand-plus drawings in the 1980s, his work Mater is composed of acrylic and oil stick on canvas.

C

At a 2009 auction, artist Jean-Michel Basquiat's Mater, composed of acrylic and oil stick on canvas, sold for \$5.8 million.

D

Decades after artist Jean-Michel Basquiat completed his 1982 work Mater, private collection purchased it for \$5.8 million.
