

2312B M1

1. The National Heritage Fellowship was created to honor exceptional folk and traditional artists in the United States for their _____. The Navajo (Diné) basket weaver Mary Holiday Black was chosen for the fellowship because she has contributed so much to the arts.

Which choice completes the text with the most logical and precise word or phrase?

- A achievements
- B predictions
- C suspicions
- D assumptions

2. Some pieces of music might have many meanings—the compositions of Delia Derbyshire can _____ as many different interpretations as there are people to listen to them—and so as long as a listener's interpretation isn't willfully absurd or the result of inattention, it is difficult to justify the claim that the listener has misunderstood the piece.

Which choice completes the text with the most logical and precise word or phrase?

- A partition
- B refute
- C counteract
- D yield

3. The following text is from Virginia Woolf's 1919 novel *Night and Day*. The text describes a gathering of aspiring young artists and intellectuals.

One person after another rose, and, as with an ill balanced axe, attempted to hew out his conception of art a little more clearly, and sat down with the feeling that, for some reason which he could not grasp, his strokes had gone awry. As they sat down they turned almost invariably to the person sitting next them, and rectified and continued what they had just said in public.

As used in the text, what does the figurative phrase "hew out" most nearly mean?

A Vacate

B Mimic

C Visualize

D Define

4. The following text is from Betty Smith's 1943 novel *A Tree Grows in Brooklyn*. Francie, a young girl, visits the library often.

Francie thought that all the books in the world were in that library and she had a plan about reading all the books in the world. She was reading a book a day in alphabetical order and not skipping the dry ones. She remembered that the first author had been Abbott. She had been reading a book a day for a long time now and she was still in the B's. Already she had read about bees and buffaloes, Bermuda vacations and Byzantine architecture. For all her enthusiasm, she had to admit that some of the B's had been hard going. But Francie was a reader.

©1947 by Betty Smith

Which choice best states the main purpose of the text?

A To illustrate Francie's enjoyment of an unusual topic

B To explain why Francie prefers reading over other activities

C To portray Francie's determination to meet a goal

D To describe a book that Francie greatly admires

5. The following text is adapted from Adib Khorram's 2018 novel *Darius the Great Is Not Okay*. Darius, a teenager from the United States, is visiting his grandparents, Mamou and Babou, and other family members in Iran.

I was too tired to fall all the way asleep, and even though Mamou was soft and warm, leaning up against her wasn't a terribly comfortable position to sleep in. So I dozed and floated on the clouds of Farsi that blew my way from the front seat of Dayi [Uncle] Jamsheed's SUV.

It reminded me of when I was little, and Mom chanted to me in Farsi every night before bedtime. It's hard to describe Farsi chanting: the way Mom drew her voice out like the notes of a cello as she recited poems by Rumi or Hafez. I didn't know what they meant, but that didn't matter. It was quiet and soothing.

©2018 by Adib Khorram

Which choice best describes the main purpose of the text?

- A To name some of the narrator's favorite poets who wrote in Farsi
- B To describe a situation the narrator thinks is annoying
- C To connect a current experience to a memory from the narrator's past
- D To indicate that the narrator's mother wants to be a poet

6. The Stowe House in Hartford, Connecticut, is the house where Harriet Beecher Stowe lived for over twenty years and wrote her novel *Poganuc People*. Now the house is a museum dedicated to Stowe's life and writings. Visitors travel to this museum to feel more connected to an author they admire. To encourage that sense of connection, the museum's curators have set up exhibits with furniture from the period and Stowe's possessions. Such exhibits help visitors understand day-to-day life in the house where Stowe felt inspired.

Which choice best states the function of the underlined sentence in the text as a whole?

- A It recounts the history of a place mentioned in the previous sentence.
- B It states the current purpose of a building mentioned in the previous sentence.
- C It recommends the works of an author mentioned in the previous sentence
- D It summarizes the career of an author mentioned in the previous sentence.

7. On painter William H. Johnson's return to the United States in 1938 after a decade in Europe, his style underwent an abrupt transformation. Turning away from landscapes painted in an expressionist style a style that often involves using fluid, distorted shapes and thick, textured brushstrokes to express the artist's subjective experience of reality-Johnson began painting portraits of Black Americans in a bold new way. Evocative of African sculpture and American and Scandinavian folk art, these portraits feature flat, deliberately oversimplified figures in a vibrant but limited color palette.

Which choice best describes the function of the underlined sentence in the text as a whole?

- A It elaborates on the previous sentence's statement about a transitional moment in Johnson's artistic career.
- B It provides information about Johnson's travels in support of a claim about his artistic influences, which is advanced in the following sentence.
- C It recounts a moment in Johnson's personal life that enabled the success of his subsequent career, which is summarized in the following sentence.
- D It presents evidence that calls into question the previous sentence's characterization of Johnson's artistic development.

8. In a study by Mika R. Moran, Daniel A. Rodriguez, and colleagues, residents of Quito, Ecuador, and Bogotá, Colombia, were surveyed about parks in their cities. Of the 618 respondents from Quito, 82.9% indicated that they use the city's parks, and of the 1,121 respondents from Bogotá, 71.9% indicated using city parks. Given that the percentage of Quito respondents who reported living within a 10-minute walk of a park was much lower than that reported by Bogotá respondents, greater proximity alone can't explain the difference in park use.

The text makes which point about the difference between the proportions of Quito residents and Bogotá residents using parks?

- A It was much larger than the researchers conducting the study expected.
- B It could be due to inaccuracies in the survey results.
- C It was calculated using sources that predate the survey.
- D It is caused by something other than the parks' proximity to city residents.

9. External shopping cues are a type of marketing that uses obvious messaging a display featuring a new product, for example, or a "buy one, get one free" offer to entice consumers to make spontaneous purchases. In a study, data scientist Sam K. Hui and colleagues found that this effect can also be achieved with a less obvious cue: rearranging a store's layout. The researchers explain that trying to find items in new locations causes shoppers to move through more of the store, exposing them to more products and increasing the likelihood that they'll buy an item they hadn't planned on purchasing.

Which response from a survey given to shoppers who made a purchase at a retail store best supports the researchers' explanation?

A "I needed to buy some cleaning supplies, but they weren't in their regular place. While I was looking for them, I saw this interesting notebook and decided to buy it, too."

B "I didn't buy everything on my shopping list today. I couldn't find a couple of the items in the store, even though I looked all over for them."

C "The store sent me a coupon for a new brand of soup, so I came here to find out what kinds of soup that brand offers. I decided to buy a few cans because I had the coupon."

D "This store is larger than one that's closer to where I live, and it carries more products. I came here to buy some things that the other store doesn't always have."

10.

Impact of Four Key Industries on Oklahoma Economy in 2017

Industry	Approximate total contribution by industry	Number of people employed by industry	Average contribution per employee by industry
Retail	\$10,738,800,000	179,208	\$59,924
Manufacturing	\$16,707,500,000	128,122	\$130,403
Transportation/warehousing	\$12,414,600,000	52,891	\$234,720
Tribal economic activity	\$7,312,400,000	51,674	\$141,510

The Chickasaw Nation, the Seminole Nation, and the more than thirty other tribes in Oklahoma operate numerous businesses and generate billions of dollars in revenue. An economics student is researching the tribes' collective activity as a single industry. The student wants to compare the average amount that industry contributed per employee to Oklahoma's economy with the average amount contributed per employee by three other industries. Looking at the table, the student finds that tribal economic activity contributed over \$141,000 per employee, on average, ranking it _____

Which choice most effectively uses data from the table to complete the comparison?

A above either retail or manufacturing and nearly equal to transportation/warehousing.

B above all three of the other industries listed in the table.

C below transportation/warehousing but above both manufacturing and retail.

D below all three of the other industries listed in the table.

11.

Studies of Cougar Population Density

Study authors	Study publication year	Location	Minimum density (cougars per 100 square kilometers)	Maximum density (cougars per 100 square kilometers)
David M. Choate et al.	2006	Utah (United States)	5.59	10.24
Randy D. Johnson	2017	North Dakota (United States)	0.45	2.78
A.J. Noss et al.	2012	Bolivia	0.36	7.99
K.M. Proffitt et al.	2015	Montana (United States)	3.20	5.60

Studies of the population density of cougars (*Puma concolor*) have yielded a range of results, which may in part reflect natural variations in the resources that cougars need to survive. For example, the difference between the maximum population density reported by Randy D. Johnson and that reported by David M. Choate et al. may indicate that _____

Which choice most effectively uses data from the table to complete the example?

A cougar habitat makes up a greater proportion of the overall land area in Utah than is the case in North Dakota.

B the cougar habitat in North Dakota cannot support as many individuals as can the cougar habitat in Utah.

C the cougar habitat in Montana can support more than 3.20 individuals per 100 square kilometers.

D there are more cougars overall in both Bolivia and Montana than there are in North Dakota.

12. Biologist Rosanna Alegado believes that we might learn how multicellular organisms developed from single-celled ones if we understand why the single-celled organism *Salpingoeca rosetta*, the oldest living relative of animals, sometimes forms colonies of cells.

Alegado and colleagues reviewed data from many studies about how *S. rosetta* responds when exposed to another type of single-celled organism, bacteria, including Ingrid Brettar's work with *Aquiflexum balticum* bacteria and Jang-Cheon Cho's work with *Croceibacter atlanticus* bacteria. Alegado and colleagues concluded that *neither A. balticum* nor *C. atlanticus* are likely to have played a significant role in the development of multicellular organisms.

Which finding, if true, would most directly support Alegado and colleagues conclusion?

A *S. rosetta* tended to form colonies when exposed to *A. balticum*, but not when exposed to *C. atlanticus*.

B *S. rosetta* tended to form colonies when exposed to *A. balticum* and when exposed to *C. atlanticus*.

C *S. rosetta* tended to form colonies when exposed to *C. atlanticus*, but not when exposed to *A. balticum*.

D *S. rosetta* did not tend to form colonies when exposed to either *A. balticum* or *C. atlanticus*.

13.

Days per Winter That Lakes Have Surface Ice

Lake	Latitude (degrees)	1980–81	1985–86	1990–91	1995–96	2000–01	2005–06
Lake Kegonsa	42.97	94	116	104	113	124	101
Näckten	62.913	177	168	144	174	133	134
Lake Baikal	51.85	96	118	92	103	127	109

It is common for freshwater lakes near or above a latitude of 45° north of the equator, like Bosten Lake in China, to accumulate surface ice in winter. The amount and duration of ice depends on many factors, including local weather conditions as well as the lake's depth, volume, and surface area, but a climate researcher claims that some lakes in these latitudes have seen a decline in the duration of ice between the early 1980s and the mid-2000s.

Which choice best describes data in the table that support the researcher's claim?

A Lake Baikal had more days of ice in the winter of 2005-06 than it did in the winter of 1980-81.

B Näckten had fewer days of ice in the winter of 2005-06 than it did in the winter of 1980-81.

C Näckten is at a higher latitude than Lake Kegonsa and typically had more days of ice per winter than Lake Kegonsa did.

(D) Näckten is at a higher latitude than Lake Kegonsa and typically had fewer days of ice per winter than Lake Kegonsa did.

14. Architects looking for inspiration may examine photographs of iconic buildings such as Centre Pompidou in Paris. A two-dimensional photograph, however, cannot capture how a building interacts with its surroundings, whether by complementing, blending in with, or perhaps even clashing with sights and activities nearby. An image of Centre Pompidou thus _____

Which choice most logically completes the text?

A serves to exaggerate the building's historical importance.

B conceals the subtle deterioration of the building's materials.

C misrepresents how the building is perceived by people who have never visited Paris.

D fails to convey the full impact of the building's design and structure.

15. The Study on Global Ageing and Adult Health (SAGE) seeks to discover long-term trends related to aging by compiling and analyzing evidence from approximately 66,000 participants in multiple countries. As with most longitudinal studies, extensive funding support is needed for SAGE to collect the relevant data over timescales and at intervals that will support robust conclusions. But the quality of a more constrained investigation, such as a sociology study seeking only to yield the average age at which people in a given city first become parents, is much less dependent on high levels of funding because _____

Which choice most logically completes the text?

A the sociology study is unlikely to be able to recruit 66,000 participants

B such studies are likely to be a lower priority for funding than SAGE.

C expanding the scope of such studies is unlikely to be feasible.

D such studies are not trying to identify trends over time.

16. Anthropologist Lívia Barbosa, of the Universidade Federal Fluminense in Brazil, _____ food and sociability in contemporary Brazil specifically, how foods such as pão de queijo (a cheese-flavored bun) and paçoca (a peanut and sugar candy) function as central mechanisms in building social relationships, values, and identities.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A are studying
- B studies
- C study
- D have studied

17. At 3,033 years old, CMC 3, a giant sequoia (*Sequoiadendron giganteum*) located in the United States, was one of the oldest known trees in the world. With over three millennia of climate data in its tree rings, a single tree like this, claims _____ Valerie Trouet, can tell the history of the world.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A dendrochronologist
- B dendrochronologist,
- C dendrochronologist:
- D dendrochronologist—

18. Julia Alvarez's 1994 novel *In the Time of the Butterflies*, a fictionalized account of the lives of the Mirabal _____ can serve as a starting point for those wanting to explore how the rule of dictator Rafael Trujillo has been represented in Dominican American literature.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A sisters, and
- B sisters and
- C sisters,
- D sisters

19. Scholars have praised Gwendolyn Brooks's 1960 poem "The Egg Boiler" for its nuanced portrayal of life in Brooks's South Side Chicago neighborhood. The poem shouldn't be regarded as being simply a product of Brooks's _____ the breadth of the poet's influences, which range from medieval English ballads to the poetry of Emily Dickinson and Paul Laurence Dunbar.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A surroundings; though, considering
- B surroundings, though; considering
- C surroundings, though, considering
- D surroundings, though. Considering

20. Sociologist Alton Okinaka sits on the review board tasked with adding new sites to the Hawaii Register of Historic Places, which includes Grove Farm, established in 1864, and the Kauai Belt Road, a section of Route 560 along the north coast. Okinaka doesn't make such decisions single-handedly, _____ historical designations must be approved by a group of nine other experts.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A however and all
- B however. All
- C however all
- D however, all

21. After appropriate permissions are granted, a typical archaeological dig begins with a surveyor making a detailed grid of the excavation site. Then, the site is carefully dug, and any artifacts found are recorded and mapped onto the site grid. _____ the artifacts are removed, cataloged, and analyzed in a laboratory.

Which choice completes the text with the most logical transition?

- A For instance,
- B On the contrary,
- C Earlier,
- D Finally,

22. To guarantee the validity of experimental results, scientists rely on precise, unchanging standards of measurement. _____ metrologists (scientists who study measurement) developed the SI, or International System of Units. The SI's units of measurement are based on unchanging values in nature, such as the mass of an electron or the speed of light.

Which choice completes the text with the most logical transition?

- A In contrast,
- B Regardless,
- C In addition,
- D For this reason,

23. Soil polluted with cadmium (a heavy metal) is harmful to many plants and animals, but the plant species *Elodea canadensis*, or Canadian waterweed, not only thrives in such conditions but also helps remediate them. As a metal hyperaccumulator, *Elodea canadensis* absorbs a large amount of cadmium and stores it safely in its roots and shoots; _____ cadmium concentrations in the soil decrease.

Which choice completes the text with the most logical transition?

- A specifically,
- B in turn,
- C nevertheless,
- D in addition,

24. While researching a topic, a student has taken the following notes:

- Iranian scholar Abu Rayhan al-Biruni studied Earth's physical features.
- He theorized that a large landmass existed west of Europe and east of Asia.
- Al-Biruni published his landmass theory in 1037 CE.

The student wants to specify when al-Biruni published his landmass theory. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A In 1037 CE, al-Biruni published his theory that a large landmass existed west of Europe and east of Asia.

B Al-Biruni, who studied Earth's physical features, published a theory about a large landmass.

C Al-Biruni was an Iranian scholar who studied Earth's physical features.

D An Iranian scholar who studied Earth's physical features, al-Biruni theorized that a large landmass existed west of Europe and east of Asia.

25.

- Jean-Michel Basquiat was an American artist who produced more than two thousand drawings and paintings.
- His work *Masonic Lodge* was completed in 1983 and sold at auction in 2008.
- *Masonic Lodge* is composed of acrylic and oil stick on canvas and measures 6,728 square inches in area.
- His work *MP* was completed in 1984 and sold at auction in 2020.
- *MP* is composed of acrylic and paper collage on canvas and measures 5,848 square inches in area.

Which choice most effectively uses information from the given sentences to emphasize how the two works are similar?

A Artist Jean-Michel Basquiat's work *Masonic Lodge* is composed of acrylic and oil stick, while *MP* is composed of acrylic and paper collage.

B Between artist Jean-Michel Basquiat's works *Masonic Lodge* and *MP*, the former is the larger of the two.

C Composed by artist Jean-Michel Basquiat in 1983 and 1984, respectively, both *Masonic Lodge* and *MP* use acrylic paint as a medium.

D Artist Jean Michel Basquiat completed *Masonic Lodge* in 1983, and *MP* followed in 1984.

26.

- Birds of *Northern South America* is an identification guidebook by ornithologists Robin Restall, Clemencia Rodner, and Miguel Lentino.
- It lists the thirty-five hummingbird species found in Suriname.
- The sooty-capped hermit is a large hummingbird found in Suriname.
- It is identifiable by its distinctive facial markings and its long, black, curved bill.
- The amethyst woodstar is a small hummingbird found in Suriname. It is identifiable by its green back and its short, black, straight bill.

Which choice most effectively uses information from the given sentences to emphasize a difference between the two birds?

A Identifiable by its long, black, curved bill and its distinctive facial markings, the sooty-capped hermit is a large hummingbird found in Suriname.

B The sooty-capped hermit and the amethyst woodstar are two of the thirty-five hummingbird species found in Suriname.

C The amethyst woodstar is a small hummingbird identifiable by its green back and its short, black, straight bill.

D Though they share several traits in common, the sooty-capped hermit is larger than the amethyst woodstar.

27. While researching a topic, a student has taken the following notes:

- Universidad Autónoma de Barcelona in Barcelona, Spain, is home to a Foucault pendulum.
- The pendulum consists of a weighted ball that swings at the end of a roughly 7-meter-long cable.
- Like all Foucault pendulums, it dangles from a fixed point that ensures the swing path of the pendulum doesn't change.
- To an observer, the swing path of a Foucault pendulum appears to change over time because Earth rotates beneath it.
- Foucault pendulums are used as a simple way to provide evidence of Earth's rotation.

The student wants to explain how a Foucault pendulum provides evidence of Earth's rotation. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A A Foucault pendulum, which consists of a weighted ball at the end of a long cable, provides evidence of Earth's rotation.

B In Barcelona, Spain, a Foucault pendulum at Universidad Autónoma de Barcelona provides evidence of Earth's rotation.

C The Foucault pendulum at Universidad Autónoma de Barcelona in Barcelona, Spain, swings on an unchanging path, but Earth rotates beneath it.

D Though it swings on an unchanging path, a Foucault pendulum appears to change its swing path over time because Earth rotates beneath it.

2312B M2

1. The following text is adapted from Elizabeth von Arnim's 1922 novel *The Enchanted April*. Mrs. Wilkins and her friend Rose are traveling in Italy.

"I'm going to have one of these gorgeous oranges," said Mrs. Wilkins, staying where she was and reaching across to a black bowl piled with them. "Rose, how can you resist them. Look-have this one. Do have this beauty-" And she held out a big one.

As used in the text, what does the phrase "reaching across to" most nearly mean?

- A Joining with
- B Gaining on
- C Stretching toward
- D Arriving at

2. Urban planning expert Francisco Lara-Valencia and colleagues have argued that managing environmental matters along the US-Mexico border _____ coordination between the two countries' governments. Since ecosystems extend across the border, actions taken on one side can have environmental effects on the other side, making international cooperation essential.

Which choice completes the text with the most logical and precise word or phrase?

- A requires
- B praises
- C reports
- D advises

3. Some robots such as Salvius (developed in 2008) and REEM-C (developed in 2013) are designed to resemble humans so that people will find it easier to interact with them. To this end, certain features such as bipedal locomotion can help to create the comforting semblance of humanity, but a robot that appears too similar to humans can make people feel more unsettled than _____.

Which choice completes the text with the most logical and precise word or phrase?

- A revolted
- B indifferent
- C soothed
- D vindicated

4. Though most hoaxes perpetrated as jokes by mischievous users of Wikipedia, an online encyclopedia that almost anyone can freely edit, have quickly been detected and removed, a few fictitious entries, such as those for the country singer-songwriter Joseph G. Williams and the Jamaican bird allegedly known as the Salvadorian Magpie, persisted on the site for many years before they were finally recognized as _____ and deleted

Which choice completes the text with the most logical and precise word or phrase?

- A enhancements
- B fabrications
- C analyses
- D revelations

5. In 2013 Fredrik Jutfelt and Maria Hedgärde published a study concluding that ocean acidification has a strong effect on the behavior of *Gadus morhua*, a species of fish. However, Jutfelt and Hedgärde's study relied on a mean sample size of only about 16 fish. In a 2022 review of various scientists' conclusions about the impacts of ocean acidification on fish behavior, Josefin Sundin and colleagues caution that relying on such a relatively small sample size can increase the potential for biased analysis. Such analysis, in turn, can contribute to reports of exaggerated effects.

Which choice best states the main purpose of the text?

- A To explain how the behavior of a fish species has changed over time
- B To note a potential concern about the findings of a scientific study
- C To discuss an aspect of ocean acidification that is frequently overlooked
- D To present a debate between two research teams about a cause of ocean acidification

6. Text 1

Death Cab for Cutie's 2003 song "Lightness" includes a specific musical pattern. That pattern consists of two alternating notes sung over and over with "wa" and "oh" sounds, resulting in a sequence of "Wa-oh-wa-oh." This pattern showed up in so many pop songs in the 2000s and 2010s that eventually it earned a nickname, "the millennial whoop."

Unfortunately, the whoop showed up so frequently that it could be more irritating than enjoyable.

Text 2

The millennial whoop could be annoying. Not every pop song needs "Wa-oh-wa-ohs!" and it seemed as though nearly every pop song released between 2000 and 2017 had them. But the whoop could also be genuinely fun or even moving. Too many songwriters used it in too many pop songs for a time, but that doesn't mean the whoop was never used well.

Which choice best describes the relationship between the perspectives provided in Text 1 and Text 2?

- A Text 1 provides an explanation of events that inspired a song, while Text 2 offers a different explanation of those events.
- B Text 1 discusses the advantages of a technique for recording music, while Text 2 discusses the problems with that technique.
- C Text 1 introduces a negative view of a musical pattern, while Text 2 presents a more positive view of that pattern.
- D Text 1 focuses on critics who praised a particular style of music, while Text 2 focuses on critics who disapproved of that style.

7. When people think of dinosaurs with feathers, they typically think of winged dinosaurs, such as the four-winged *Microraptor*. However, many dinosaurs that didn't have wings also had feathers on their bodies. For instance, research indicates that the wingless, long-tailed *Sinosauroptery* likely had feathers.

According to the text, what did *Microraptor* and *Sinosauroptery* have in common?

- A They were both wingless dinosaurs.
- B They both had feathers.
- C They both could fly.
- D They both were hunted by the same predator.

8. Women like Juanita Moody made important early contributions to the history of US cryptology, a field concerned with secure data communication and storage. Moody worked as a cryptanalyst for the National Security Agency and was the first recipient of the National Intelligence Medal of Achievement. In this way, Moody and others like her helped make it possible for more women—such as Maureen Baginski, who currently works in intelligence and supports the FBI—to enter the field of cryptology.

According to the text, what is one similarity between Moody and Baginski?

- A They both have argued that more US schools should teach the history of cryptology.
- B They both founded organizations that encourage women to pursue careers in cryptology.
- C They both have contributed to the field of cryptology.
- D They both have worked in the field of history.

9. The Federalist Papers are a collection of essays written by Alexander Hamilton, John Jay, and James Madison and published pseudonymously in the *New York Packet* and other New York newspapers in 1787-88. Though the authorship of most of the essays is certain, that of some is obscure: for instance, while No. 15, "The Insufficiency of the Present Confederation to Preserve the Union," was surely penned by Hamilton, No. 62, "The Senate," may have been written by either Hamilton or Madison. The difficulty of determining No. 62's author arises not from a lack of evidence but from too much contradictory evidence.

Based on the text, which choice best explains why it is challenging to confidently assign authorship of the essay "The Senate"?

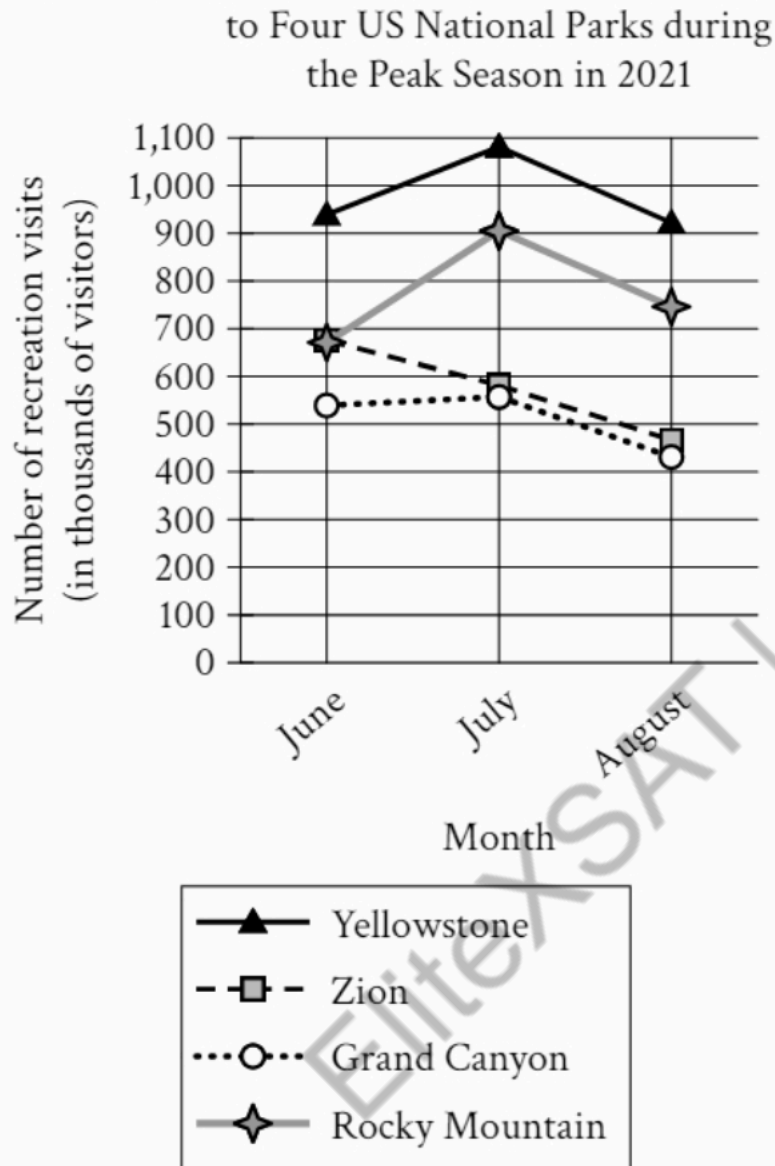

A Support can be found for a strong case that either Hamilton or Madison was the sole author of "The Senate."

B The evidence that would indisputably prove that either Hamilton or Madison was the sole author of "The Senate" has been lost.

C Evidence shows that two versions of "The Senate," one authored by Hamilton and another authored by Madison, appeared in different New York newspapers.

D It is most likely that "The Senate" was the product of a collaborative effort between Hamilton and Madison.

10.

In 2021, four of the United States national parks that were among the most visited were Grand Canyon National Park, Rocky Mountain National Park, Yellowstone National Park, and Zion National Park. The graph shows the number of visits for recreation to each of these parks during the three-month period with the highest number of visitors. A student notes that among the parks shown in the graph, the park with the highest monthly recreation visits in all three months was _____

Which choice most effectively uses data from the graph to complete the text?

A Zion National Park.

B Rocky Mountain National Park.

C Yellowstone National Park.

D Grand Canyon National Park.

11. Male túngara frogs make complex calls to attract mates, but their calls also attract frog-biting midges, insects that feed on the frogs' blood. Researchers Ximena Bernal and Priyanka de Silva wondered if the calls alone are sufficient for midges to locate the frogs or if midges use carbon dioxide emitted by frogs as an additional cue to their prey's whereabouts, like mosquitoes do. In an experiment, the researchers placed two midge traps in a tungara frog breeding area. One trap played recordings of túngara frog calls and the other released carbon dioxide along with playing the calls. Bernal and de Silva concluded that carbon dioxide does not serve as an additional cue to frog-biting midges.

Which finding from the experiment, if true, would most directly support Bernal and de Silva's conclusion?

- A Only a small number of midges were found in the traps, though the majority were found in the trap that played calls and released carbon dioxide.
- B Midges entered the trap that released carbon dioxide and played calls only during or immediately after periods of carbon dioxide release.
- C More midges were found in the trap that only played calls than in the trap that played calls and released carbon dioxide.
- D The trap that released carbon dioxide and played calls attracted few midges when carbon dioxide concentrations were low but attracted many midges when carbon dioxide concentrations were high.

12. The Younger Dryas was a period of extreme cooling from 11,700 to 12,900 years ago in the Northern Hemisphere. Some scientists argue that a comet fragment hitting Earth brought about the cooling. Others disagree, partly because there is no known crater from such an impact that dates to the beginning of the period. In 2015, a team led by Kurt Kjar detected a 19-mile-wide crater beneath a glacier in Greenland. The scientists who believe an impact caused the Younger Dryas claim that this discovery supports their view. However, Kjar's team hasn't yet been able to determine the age of the crater. Therefore, the team suggests that _____

Which choice most logically completes the text?

- A it can't be concluded that the impact that made the crater was connected to the beginning of the Younger Dryas.
- B it can't be determined whether a comet fragment could make a crater as large as 19 miles wide.
- C scientists have ignored the possibility that something other than a comet fragment could have made the crater.
- D the scientists who believe an impact caused the Younger Dryas have made incorrect assumptions about when the period began.

13. The small white heron and the small dark heron are long-legged birds that live in wetlands, like the Everglades in Florida. Laura D'Acunto and colleagues wanted to know how these birds choose an area in which to live. They looked at features of the birds' habitats, such as the geographic location of the area and how deep the water is during the birds' breeding season. They found that small white herons prefer areas with deep water during breeding season, but that was not true for small dark herons. The researchers concluded that water management strategies that increase the depth of water in potential wetland bird habitats during breeding season are therefore more likely to _____

Which choice most logically completes the text?

A decrease the area's appeal to both small white herons and small dark herons than they are to increase the appeal to either.

B extend the average lifespan of small white herons already in the area than they are to attract a greater number of those birds to the area.

C attract small white herons to the area than they are to attract small dark herons to the area.

D attract birds that don't typically live in wetlands to the area than they are to attract small white herons or small dark herons to the area.

14. On Guadalupe Peak, which _____ an elevation of 8,751 feet, one can find the highest point in Texas.

Which choice completes the text so that it conforms to the conventions of Standard English?

A reaches

B reach

C reaching

D to reach

15. The Ubangi River, which is 1,405 miles long, _____ into the Congo River.

Which choice completes the text so that it conforms to the conventions of Standard English?

A flow

B are flowing

C have flowed

D flows

16. At the Actors Pulse in Sydney, Australia, students can sign up _____ the world-famous Meisner acting technique. Created by acting teacher Sanford Meisner, this technique trains actors to react naturally to the other performers in a scene.

Which choice completes the text so that it conforms to the conventions of Standard English?

A learned

B to learn

C learn

D are learning

17. Lê Luong Minh became the thirteenth secretary-general of the Association of Southeast Asian Nations (ASEAN) in January 2013, making _____ the first time the organization would appoint a Vietnamese leader.

Which choice completes the text so that it conforms to the conventions of Standard English?

A these

B those

C this

D some

18. On February 1, 2018, Florida-based researchers Martha A. Scholl, Maoya Bassiouni, and Angel J. Torres-Sánchez _____ climate data from several sites in Puerto Rico's Luquillo Mountains. At 8:30 a.m., the air temperature was 16°C at site CC1, the site with the highest elevation, and it had shifted to 16.8°C by 11:00 p.m.

Which choice completes the text so that it conforms to the conventions of Standard English?

A compiled,

B compiled

C compiled;

D compiled:

19. After ten days and twenty-two hours, space shuttle flight STS-66 landed _____ Edwards Air Force Base.

Which choice completes the text so that it conforms to the conventions of Standard English?

A at—

B at:

C at,

D at

20. At 1,723 years old, KET 3996, a limber pine (*Pinus flexilis*) located in the United States, is one of the oldest known trees in the world. With almost two millennia of climate data in its tree rings, a single tree like _____ claims dendrochronologist Valerie Trouet, can tell the history of the world.

Which choice completes the text so that it conforms to the conventions of Standard English?

A this

B thls:

C this,

D this:

21. In this chapter, we will focus on Sonia Sanchez's poem "This Is Not a Small Voice," paying special attention to its first lines: "This is not a small voice / you hear this is a large / voice coming out of these cities." We _____ our attention next to the works of Jay Wright and bell hooks, two other poets associated with the Black Arts movement.

Which choice completes the text so that it conforms to the conventions of Standard English?

A will turn

B turned

C will have turned

D had turned

22. Textile artist Amber Joy Greenidge-Sabral wanted to avoid using harsh synthetic dyes that could be damaging to the environment. _____ she began experimenting with more environmentally friendly natural dye methods, using organic materials like sassafras and indigofera for their natural orange and blue colors.

Which choice completes the text with the most logical transition?

A In actuality,

B To sum up,

C Nevertheless,

D With this in mind,

23. The architects of Spain's Modernista movement took inspiration from the natural world when adding finishing touches to their buildings ._____they favored plant- and animal-inspired design flourishes, like the ornate floral tilework of Hospital de Sant Pau, a hospital by architect Lluís Domenech i Montaner.

Which choice completes the text with the most logical transition?

- A Even so,
- B On the contrary,
- C Meanwhile,
- D In particular,

24. Ursula K. Le Guin's *Planet of Exile*, a novel about a colony of humans stranded on a harsh planet, is classified as science fiction. _____the novel *A Wizard of Earthsea*, which is about a hero's attempt to atone for his past actions, is classified as fantasy.

Which choice completes the text with the most logical transition?

- A On the other hand,
- B Afterward,
- C For example,
- D In other words,

25. While researching a topic, a student has taken the following notes:

- Meteorites found on Earth are divided into two categories.
- A meteorite that was observed falling to Earth before being recovered is known as a meteorite fall.
- All other meteorites found on Earth are known as meteorite finds.
- There have been about 1,200 recorded meteorite falls.
- There have been over 60,000 recorded meteorite finds.

The student wants to contrast the number of meteorite falls with the number of meteorite finds. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A A meteorite that was observed falling to Earth before being recovered is known as a meteorite fall; all others are known as meteorite finds

B Meteorites found on Earth are divided into two categories: meteorite falls and meteorite finds.

C There have been about 1,200 recorded meteorite falls, or meteorites observed falling to Earth.

D While there have been only about 1,200 recorded meteorite falls, there have been over 60,000 meteorite finds.

26. While researching a topic, a student has taken the following notes:

- Chromosomes are cellular structures that contain genes.
- Genes carry critical instructions for determining an organism's physical traits.
- Members of the same species typically have the same number of chromosomes.
- As a species, the Tibetan antelope (*Pantholops hodgsoni*) has sixty chromosomes.
- As a species, the *Sterkiella histriomuscorum*, a simple, single-celled protozoan, has over 15,000 chromosomes.

The student wants to emphasize a difference between *Pantholops hodgsoni* and *Sterkiella histriomuscorum*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A *Sterkiella histriomuscorum*, a simple, single-celled protozoan, has over 15,000 cellular structures called chromosomes.

B *Sterkiella histriomuscorum* has over 15,000 chromosomes, which is far more than the sixty chromosomes *Pantholops hodgsoni* has.

C Individual members of the Tibetan antelope species typically have the same number of chromosomes: sixty.

D *Sterkiella histriomuscorum* and *Pantholops hodgsoni* both have chromosomes, which are cellular structures that contain genes.

27. While researching a topic, a student has taken the following notes:

- The Clovis First hypothesis proposes that ancient humans known as Clovis were the first to populate North America.
- The Clovis arrived around 13,000 years ago.
- Stone tools found at the Chiquihuite Cave site in Mexico date to approximately 26,000 years ago.
- These items support the idea that humans were present in North America before the Clovis population arrived.
- More than a dozen North American sites containing pre-Clovis items have been identified.

The student wants to make and support a claim about humans' arrival in North America. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A It has been claimed that the Clovis, arriving around 13,000 years ago, were the first human inhabitants of North America.

B The stone tools found at the Chiquihuite Cave site should not be overlooked: they have important implications for the Clovis First hypothesis.

C While the Clovis First hypothesis proposes that humans first arrived in North America around 13,000 years ago, humans had likely arrived before that time.

D Arriving about 13,000 years ago, the Clovis were likely not the first humans in North America; items from more than a dozen sites suggest that humans had arrived before that time.
